DETAILED ACTION

Continued Examination Under 37 CFR 1.114

A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 2/11/2011 has been entered.

EXAMINER'S AMENDMENT

The application has been amended as follows:

1. Please cancel claims 1-25.

Allowable Subject Matter

2. Claims 26-28, 30, and 34-36 are allowed.

The following is an examiner's statement of reasons for allowance:

Regarding claim 26, the prior art alone or in combination fails to disclose or make obvious a system for defect localization in a test structure comprising a means for illuminating an electro-optically active layer, a detector configured to detect light scattered or reflected from this layer, an alternating current electrical signal coupled to the test structure and further configured to synchronize phases of the alternating current electrical signal with image captures of the test structure and a processor configured to generate a first and second image of the test structure during a first and second respective phase of the alternating electrical signal based on detection signals from the detector and finally a processor configured to locate the defect in the test structure by processing these first and second images.

The closest prior art to the applicant's claimed invention is Charles et al. (US 6271671) in view of Alumot et al. (US 5,699,447).

Charles teaches a defect localization system with a means for illuminating an electro-optically active layer, a detector, a signal generator, and a processor.

Charles et al. does not teach the device that is adapted to acquire images or the processor configured to generate those images as is presently recited in claims 26, 34 and 36 or that the signal generator (40) is configured to synchronize phases with image captures of the test structure.

While Alumot teaches image acquisition in multiple phases, those phases are not taught to correspond to the electrical phases of the applied alternating current and Alumot does not teach a processor that is configured to generate a first and second image of the test structure during a first and second respective phase of the alternating electrical signal based on detection signals from the detector and finally a processor configured to locate the defect in the test structure by processing these first and second images.

Claims 27, 28, 30, and 34-36 are allowed by the virtue of dependency on the allowed claim 26.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
